

AI Impact on Supply Chain Management

Vinay Santosh Bagale

SAVP (Winjit Technologies Pvt Ltd)

Objectives

Identify and Categorize

- Identify and categorize AI applications across supply chain

Develop

- Develop a conceptual framework

Investigate

- Investigate the specific role of AI-driven systems

Analyze

- Analyze the main challenges

Propose

- Propose a set of guidelines for AI governance in SCM

Possible Contribution

Theoretical Contribution: AI-SCM Impact Framework

Methodological Contribution: Quantify the value creation from AI-human collaboration in SCM

Practical Contribution: Evidence-based strategies and guidelines

Impact

Societal Impact

Stabilizing Supply
Sustainability

Industry Impact

Competitiveness

Academic Impact

Innovation

Novelty in Focus

Research models AI's role in the full cycle:

Pre-Disruption (predictive risk sensing).

During-Disruption (real-time adaptive decision-making).

Post-Disruption (accelerated recovery and learning).

Methodological Innovation

- Integration of AI Models with SC Models
- Industry-Specific AI Comparison

Thanks!
